

McNeilus team members,

As we continue to execute our parts distribution strategy, we are announcing today that we will be utilizing 70,000 sq. ft. of space within our Murfreesboro, Tenn. facility for distribution needs. This distribution space supports our long-term modernization strategy and efforts to continuously improve our customers' experience. We expect the distribution center space to be operational in late Q1.

Lifecycle is a key growth area for the Vocational segment and Oshkosh Corporation. Maintaining and strengthening our product inventory remains a focus of McNeilus' operational model, as it ensures that our dealers and customers have quick access to the parts that we distribute. Additionally, we will be exiting our location in Lakeland, Florida as our dealer partner Ten-8 has recently opened a new location in Lake Wales to ensure care for customers in that area.

The implementation of the Murfreesboro distribution center is the first step in transforming our aftermarket distribution, creating more access to parts supporting the refuse industry. The facility will help support growing stocking capability, help reduce delivery times to customers and create a centralized hub to fill orders from our growing dealer footprint

These steps align with the vision shared at our June 2025 Investor Day and we look forward to completion so we can better serve our customers and dealers.
