

Valued partner,

The ongoing threat of cyber-related attacks within supply chains is becoming a top risk in all industries. Safeguarding digital information shared between Oshkosh Corporation and our suppliers is critical to protecting the digital infrastructure, customer data, and the continuity of supply.

Oshkosh Corporation has created a process and toolset to help identify and combat cybersecurity threats. Our program consists of internal and external assessments that evaluate processes and procedures regarding cybersecurity within your organization and actively monitors internet presence for online vulnerabilities.

Click [Here](#) to access the Oshkosh Supplier Network. Once in the OSN, click image shown below to link to the Cybersecurity Readiness Program:

Here you will be provided the required training that enables all suppliers to be compliant. Please navigate and familiarize yourself with the process. No further action beyond reviewing the training will be needed unless Oshkosh Corporation sends you an assessment for your company to complete.

We are better together when we minimize the risk of cybersecurity threats through awareness, communication, and teamwork.

Oshkosh Corporation GPSC Leadership Team
